The invention relates to a novel isolated small interfering RNA (sirNA) CC polynucleotide, comprising at least one nucleotide sequence from any of the 20 fully defined sequences given in the specification. The invention CC further relates to: a pharmaceutical composition comprising a new sirNA construct, comprising a polynucleotide that is capable of directing transcription of an sirNA; a host cell transformed or transfected with the above recombinant nucleic acid construct; a method for interfering continuous and protein tyrosine phosphatase (PTP)1B polypeptide, or its variant; a method for identifying a component of a PTP1B signal cransduction pathway; a method for modulating an insulin receptor protein the sacciated disorder. The sirNA has the following activities:

CC immunosuppressive, and antimicrobial. The novel sirNA polynucleotides can be used in gene therapy to treat disorders. The composition and methods care useful in treating disorders associated with protein, such as diabetes, obsestly, hyperglycaemia-induced construction, such as diabetes, obsestly, hyperglycaemia-induced construction for the invention. This polynucleotide sequence represents an sirNA consents of the invention of a protein tyrosine.
                                        phosphatase of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        New small interfering polynucleotide that modulates protein tyrosine phosphatase (PTP)1B polypeptide signal transduction, useful for treating disorders associated with altered PTP1B signal transduction, e.g.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Example
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Lewis SP,

The sirnA of the invention demonstrates cycostatic activity and may be useful for modulating expression of the BCR-ABL gene, as well as for treating leukaemia or lymphoma and in diagnosis, drug screening, target identification and validation, genetic engineering, gene function studies and gene mapping. The current sequence is that of the human ABL1-targeted sirNA of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        and diagnosis of leukemia and lymphoma, downregulates the breakpoint cluster region-Abelson (BCR-ABL) gene.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ADO14633 standard; RNA; 19
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Sequence 19

The sinas can be unmodified or chemically modified, can contain deoxyribonucleotides, and can be chemically synthesised, expressed from a vector or enzymatically synthesised. The invention also relates to kits for the in vitro or in vivo delivery of siRNA; conjugates and/or complexes of siRNA; and vectors that express siNA. The siNAs are used to modulate expression of the PDGFr gene in cells, tissue explants or organisms (e.g., by ex vivo gene therapy), or in grafts and transplants for the treatment of a variety of conditions. They may be used for the treatment of a variety of conditions. They may be used for treating leukaemia and solid tumours, restenosis, polycystic kidney disease, bronchiolitis, glomerulonephritis and stroke. The siNAs are also useful for drug screening, diagnosis, therapequentic target identification and solid explication charmacorenomics.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         further comprise sense and antisense regions, or alternatively are assembled from a sense oligonucleotide and an antisense oligonucleotide.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The invention relates to short interfering nucleic acids (sINA) which downregulate expression of the human platelet-derived growth factor receptor (PDGFr) gene by RNA interference. The siNAs may or may not comprise ribonucleotides and may be double or single stranded. They
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           short interfering nucleic acid; siNA; short interfering RNA; siRNA; double-stranded RNA; micro-RNA; miRNA; short hairpin RNA; shRNA;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  cytostatic; vasotropic; nephrotropic; cerebroprotective; treating leukaemia; solid tumors; restenosis; polycystic kidney disease; bronchiolitis; glomerulonephritis; stroke; RNA interference;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Human PDGFr-targeted siNA lower strand SEQ ID NO:375.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              01-JUL-2004
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           ADO14944;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The invention relates to a novel double-stranded short interfering nucleic acid (siNA) that downregulates expression of the breakpoint cluster region-v-abl Abelson murine laukaemia viral oncogene homologue 1 (BCR-ABL) gene. The siRNA of the invention demonstrates cytostatic activity and may be useful for modulating expression of the BCR-ABL gene, as well as for treating leukaemia or lymphoma and in diagnosis, drug screening, target identification and validation, genetic engineering,

                                                                                                                                    The invention relates to a novel double-stranded short interrering nucleic acid (siNA) that downregulates expression of the breakpoint cluster region-v-abl Abelson murine leukaemia viral oncogene homologue 1 (BCR-ABL) gene. The siRNA of the invention demonstrates cytostatic activity and may be useful for modulating expression of the BCR-ABL gene, as well as for treating leukaemia or lymphoma and in diagnosis, drug screening, target identification and validation, genetic engineering, gene function studies and gene mapping. The current sequence is that of the human ABL1-targeted siRNA of the invention.
                                                                                                                                                                                                                                                                                                                                                                                          WPI;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    chemically modified, can contain deoxyribonucleotides, and can be chemically synthesised, expressed from a vector or enzymatically synthesised. The invention also relates to kits for the in vitro or in synthesised. The invention also relates to kits for the in vitro or in vivo delivery of siNA; conjugates and/or complexes of siNA; and vectors that express siNA. The siNAs are used to modulate expression of the EZH2 gene in cells, tissue explants or organisms (e.g., by ex vivo gene therapy), or in grafts and transplants for the treatment of a variety of conditions. They may be used for treating cancer. The siNAs are also useful for drug screening, diagnosis, therapeutic target identification and validation, genetic engineering, pharmacogenomics, studying gene function, and gene mapping (e.g., of single nucleotide polymorphisms). The present sequence represents the upper strand of a human EZH2 targeted double stranded siNA, which is identical to the EZH2 transcript target
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    downregulate expression of the human polycomb group protein EZH2 ger RNA interference. The siNAs may or may not comprise ribonucleotides may be double or single stranded. They further comprise sense and

The siRNA of the invention demonstrates cytostatic activity and may be useful for modulating expression of the BCR-ABL gene, as well as for treating leukaemia or lymphoma and in diagnosis, drug screening, target identification and validation, genetic engineering, gene function studies and gene mapping. The current sequence is that of the human ABL1-targeted siRNA of the invention.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             S
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The invention relates to short interfering nucleic acids (siNA) which CC downregulate expression of the one or more telomerase genes by RNA CC interference. The siNAs may or may not comprise ribonuclectides and may CC be double or single stranded. They further comprise sense and antisense CC regions, or alternatively are assembled from a sense oligonuclectide and an antisense oligonuclectide. Specifically, the siNAs include short CC interfering RNA (siRNA), double-stranded RNA, micro-RNA (miRNA) and short CC can contain deoxyribonuclectides, and can be chemically synthesised, CC expressed from a vector or enzymatically synthesised. The invention also CC relates to kits for the in vitro or in vivo delivery of siNA, conjugates CC and/or complexes of siNA; and vectors that express siNA. The siNAs are CC used to modulate expression of the telomerase genes in cells, tissue CC used for treating cancer, restenosis, infectious diseases (specifically protozoal), transplant rejection, or autoimmune or age-related diseases, CC e.g. multiple sclerosis, lupus erythematosus, AIDS, macular degeneration, screening, diagnosis, therapeutic target identification and validation, CC genetic engineering, pharmacogenomics, studying gene function, and gene can paping (e.g., of single nucleotide polymorphisms). The present sequence crepresents the lower strand of a human TERT-targeted double-stranded
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Matches 15;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Query Match

                                                                                                                                                                              cc include short interfering RNA (siRNA), double-stranded RNA, micro-RNA (miRNA) and short hairpin RNA (shRNA). The siNAs can be unmodified or chemically modified, can contain deoxyribonucleotides, and can be cc chemically synthesised, expressed from a vector or enzymatically contain the sinas to kits for the in vitro or in contain deoxyribonucleotides, and can be cc vivo delivery of siNA; conjugates and/or complexes of siNA; and vectors that express siNA. The siNAs are used to modulate expression of the EZH2 gene in cells, tissue explants or organisms (e.g., by ex vivo gene conditions. They may be used for treating cancer. The siNAs are also cuseful for drug screening, diagnosis, therapeutic target identification and validation, genetic engineering, pharmacogenomics, studying gene condition, and gene mapping (e.g., of single nucleotide polymorphisms).

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            문
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         S
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        CC deoxyribonucleotides, and can be chemically synthesised, expressed from a CC vector or enzymatically synthesised. The invention also relates to kits CC for the in vitro or in vivo delivery of siNA; conjugates and/or complexes CC of siNA; and vectors that express siNA. The siNAs are used to modulate CC expression of the IGF-1R gene in cells, tissue explants or organisms CC (e.g., by ex vivo gene therapy), or in grafts and transplants for the CC treatment of a variety of conditions. They may be used for treating CC kidney disease, inflammatory and/or allergic diseases, autoimmune CC diseases and transplant rejection. The siNAs are also useful for drug conserving, diagnosis, therapeutic target identification and validation, CC genetic engineering, harmacogenomics, studying gene function, and gene CC mapping (e.g., of single nucleotide polymorphisms). The present sequence CC represents the upper strand of a human IGF-1R trargeted double-stranded CC siNA, which is identical to the IGF-1R transcript target sequence.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Ä
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ADF9353

used for treating cancer, restenosis, infectious diseases (specifically protozoal), transplant rejection, or autoimmune or age-related diseases, e.g. multiple sclerosis, lupus erythematosus, AIDS, macular degeneration, skin ulcers and rheumatoid arthritis. The siNAs are also useful for drug screening, diagnosis, therapeutic target identification and validation, genetic engineering, pharmacogenomics, studying gene function, and gene mapping (e.g., of single nucleotide polymorphisms). The present sequence represents the upper strand of a human TERT-targeted double-stranded siNA, which is identical to the c-fos transcript target sequence.
                                                                                                                                                                                                                                                                                                                                                           interfering RNA (siRNA), double-stranded RNA, micro-RNA (miRNA) and short hairpin RNA (shRNA). The siNAs can be unmodified or chemically modified, can contain deoxyribonucleotides, and can be chemically synthesised, expressed from a vector or enzymatically synthesised. The invention also relates to kits for the in vitro or in vivo delivery of siNA; conjugates and/or complexes of siNA; and vectors that express siNA. The siNAs are used to modulate expression of the telomerase genes in cells, tissue explants or organisms (e.g., by ex vivo gene therapy), or in grafts and transplants for the treatment of a variety of conditions. They may be
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The invention relates to short interfering nucleic acids (siNA) which downregulate expression of the one or more telomerase genes by RNA interference. The siNAs may one comprise ribonucleotides and may be double or single stranded. They further comprise sense and antisense regions, or alternatively are assembled from a sense oligonucleotide and an antisense oligonucleotide. Specifically, the siNAs include short

```
The invention relates to short interfering nucleic acids (siNA) which CC downregulate expression of the human insulin-like growth factor 1 CC receptor (IGF-IR) gene by RNA interference. The siNAs may or may not CC comprise ribonucleotides and may be double or single stranded. They CC further comprise sense and antisense regions, or alternatively are assembled from a sense oligonucleotide and an antisense oligonucleotide. Specifically, the siNAs include short interfering RNA (siRNA), double-CC stranded RNA, micro-RNA (miRNA) and short hairpin RNA (shRNA). The siNAs CC can be unmodified or chemically modified, can contain CC deoxyribonucleotides, and can be chemically synthesised, expressed from a CC can be unmodified or chemically synthesised, expressed from a CC for the in vitro or in vivo delivery of siNA; conjugates and/or complexes CC of siNA; and vectors that express siNA. The siNAs are used to modulate expression of the IGF-IR gene in cells, tissue explants or organisms CC (e.g., by ex vivo gene therapy), or in grafts and transplants for the CC cancer and other proliferative diseases (e.g., restenosis and polycystic c kidney disease), inflammatory and/or allergic diseases, autoimmune CC diseases and transplant rejection. The siNAs are also useful for drug screening, diagnosis, therapeutic target identification and validation, and gene
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     RESULT 2035

                                                                       The invention relates to short interfering nucleic acids (siNA) which downregulate expression of the human insulin-like growth factor 1 receptor (IGF-1R) gene by RNA interference. The siNAs may or may not comprise ribonucleotides and may be double or single stranded. They further comprise sense and antisense regions, or alternatively are assembled from a sense oligonucleotide and an antisense oligonucleotide.
                                                                                                                                                                                                                                                                                                               diagnosis

                                                                                                                                                                                                                                                       밁
                                                                                                                                                           S
                                                                                                                                                                                                                                                                                                       The present invention describes a double-stranded short interfering conucleic acid (siNA) that downregulates expression of the vascular endothelial growth factor receptor (VEGFR) gene. Also described: (1) a siNA that downregulates the VEGF gene; (2) kits for in vitro or in vivo delivery of siNA; (3) conjugates and/or complexes of siNA; (4) vectors that express siNA; and (5) single-stranded siNA with similar properties. The siNAs have antiangiogenic, cytostatic, antidiabetic, ophthalmological activities. The siNA are useful for modulating compression of VEGFR genes. The siNA are potentially useful for treating a wide range of angiogenesis-associated conditions, particularly cancers, diabetic retinopathy, macular degeneration, convascular glaucoma, arthritis, psoriasis, endometriosis, angiofibroma, and polycystic kidney disease. The siNA may also be useful for diagnosis, drug screening, studying gene function, and also for gene mapping (e.g. of single-nucleotide polymorphisms). The present secuence is used in the

New double-stranded interfering nucleic acid, useful e.g. for treatment and diagnosis of cancer, downregulates the vascular endothelial growth

Example 3; SEQ ID NO 1955; 207pp; English.

CC endothelial growth factor receptor (VEGFR) gene. Also described: (1) a CC siNA that downregulates the VEGF gene; (2) kits for in vitro or in vivo Cd delivery of siNA; (3) conjugates and/or complexes of siNA; (4) vectors CC that express siNA; and (5) single-stranded siNA with similar properties. The siNAs have antianglogenic, cytostatic, antidiabetic. Ophthalmological activities. The siNA are useful for modulating cophthalmological activities. The siNA are useful for modulating cophtaing) the expression of VEGFR genes. The siNA are potentially CC (downregulating) the expression of of angiogenesis-associated conditions, CC particularly cancers, diabetic retinopathy, macular degeneration, CC neovascular glaucoma, arthritis, psoriasis, endometriosis, angiofibroma, CC and polycystic kidney disease. The siNA may also be useful for diagnosis, Cdrug screening, target identification and validation, genetic cengineering, studying gene function, and also for gene mapping (e.g. of single-nucleotide polymorphisms). The present sequence is used in the Caxemplification of the present sequence is used in the nucleic acid (siNA) that downregulates expression of the vascular endothelial growth factor receptor (VEGFR) gene. Also described: The present invention describes a double-stranded short interfering exemplification of the present invention.

Sequence 19 BP; 2 A; 6 C; 8 G; 0 T; 3 U; 0 Other;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               В
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  S
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                CC panhandle structure to extension, and subjecting the panhandle structure CC to PCR in the presence of a first primer homologous to the second CC portion, where the unknown region is amplified. In the method of CC amplifying an unknown region that flanks a known region of a cancer-CC associated DNA sequence, the template polynucleotide comprises a sense crand, comprising the known and unknown regions. The unknown region is comprises a first or second portion. The thrown region is CC nearer the 3'-end of the sense strand than is the known region is CC nearer the unknown region than is the second portion. The loop-forming CC oligonucleotide is complementary to the first portion. The loop-forming CC complementary to the second portion is generated at the free end of the CC comprises ATF1 (not defined) or BCR (B cell receptor). The method is Useful for amplifying an unknown region that flanks a known region of a cancer-associated DNA sequence. Also disclosed as new is the use of the CC method in the analysis of the breakpoint region of the human MLL gene, CC where the chromosomal breaks results in gene fusions with AF-4, CDX-6 and SEPTIN6 and are associated with ALL and AML (acute lymphoblastic CC leukaemia and acute myeloid leukaemia). MLL is located on chromosome CC craces as a context is a primer used in the analysis of the MLL.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     CC hypotensive, vasotropic, dermatological, anorettic, immunosuppressive, CC cyrostatic, antiinfertility, haemostatic, antiinflammatory, neuroprotective, anabolic, nootropic and antiparkinsonian activities, and can be used in gene therapy. The NOVX CC sequences can be used as a therapeutic in the manufacture of a medicament for treating a syndrome associated with a human disease, such as a cc pathology associated with NOVX. The NOVX proteins and nucleic acids cor conditions associated with NOVX sequences, including cardiomyopathy, catheroscierosis, hypertension, congenital heart defects, pulmonary stenosis, scleroderma, obesity, metabolic discurbances associated with Obssity, transplantation, advenolable with discurbances associated with cobssity, transplantation, darenolable with corporation and fertility, haemoshilia, graft versus host disease, neoplasm, cd disease, anorexia, neurodegenerative disorders (e.g. Alzheimer's disease, CC disease, anorexia, neurodegenerative disorders (e.g. Alzheimer's disease, cor parkinson's disease), immune disorders, haematopoietic disorders, dyslipidaemias, and wasting disorders, haematopoietic disorders, cor parkinson's disease, immune disorders, haematopoietic disorders, and as corporated with chronic diseases.

CC The proteins can also be used as immunogens to produce antibodies and as corporated individual from minute biological sample. The present corporate incertion is used in chromosome mapping, and in forensic identification of a biological sample. The present corporate incertion is used to not a present when the present incertion.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ર્
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The present invention describes a method of arraying genome clones. The method comprises: (a) clones of the genomic libraries contained in multiwell plates numbered for discrimination are mixed in each of the multiwell plates; (b) a primer designed based on the chromosome marker sequence is added to the mixture to carry out an amplification reaction; (c) a signal corresponding to the marker is detected from the resultant camplified product to specify the discrimination Nos. of the multiwell plates containing the clones having said marker sequence; (d) the order of the markers is changed so that the same discrimination Nos. succeed to the maximum in the specified discrimination Nos. to array the multiwell plates; (e) the clones in the multiwell plates of the specified conditation Nos. are mixed respectively in each wells of longitudinal and lateral directions; (f) the mixed clones are cultured and the resultant cultures are amplified by using the above primer; (g) signals created from the amplified products; (h) the clones in the multiwell plates of longitudinal and elected from the detected result; and (i) the clones are reconstituted as the positions on the chromosome and arrayed. The microarray is useful for gene analysis. ABIA2957 to ABIA5322 represent PCR primers for human chromosome 21g22.1, which are specifically claimed for use in the present invention

The primer is based on a polynucleotide product amplified by panhandle PCR, and was used in a validating PCR, generating a product of 411 nucleotides. The invention relates to methods for the panhandle PCR amplification of a region of DNA of unknown sequence that flanks a region of a leukaemia-associated gene, especially MLL, of known sequence in a human patient. When the method was applied to the ALL infant patient, a translocation breakpoint was identified at nucleotide 3802 of the breakpoint cluster region (bcr) of MLL, in MLL intron 8
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Amplifying an unknown region flanking a known region of the leukemia-
associated MLL gene for diagnosing leukemia, comprises using a panhandle
polymerase chain reaction.
                                                                                 Amplifying an unknown region that flanks a known region of a cancer-
associated DNA sequence by subjecting the panhandle structure to
extension and to PCR in the presence of a first primer homologous to

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Sequences AAS42806-AAS42926 represent cDNA molecules and PCR primers for cDNA molecules encoding human G-protein coupled receptor (GPCR) polypeptides. The protein and DNA sequences of the invention can be used to identify compounds which bind to GPCR polypeptides and in screening for compounds that modulate GPCR activity. By screening a human subject for the presence of mutations in GPCR DNA, a GPCR-related disorder or a genetic predisposition can be diagnosed. The sequences can also be used for treatment and prevention of mental disorders such as schizophrenia, attention deficit disorder, anxiety, depression, dementia and bipolar disorder, neurological disorders such as schizophrenia, attention deficit disorders such as functington's disease,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Parkinson's disease and Tourette's syndrome, metabolic disorders such as obesity, anorexia and type 2 diabetes, cardiovascular disorders such as thrombosis, myocardial infarction, cardiomyopathy and atherosclerosis,
                                                               Homo sapiens
                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Cyclin B1 ribozyme binding site SEQ ID NO:3460.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        10-SEP-2001

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The present invention describes a method for treating a proliferative CC skin or eye disease and scarring. The method involves administering a cribozyme (I) which cleaves RNA encoding a cytokine involved in CC inflammation, matrix metalloproteinase (MMP), cyclin, cell-cycle dependent kinase, growth factor or a reductase, or administering a culleic acid molecule (II) comprising a promoter operably linked to a nucleic acid segment encoding (I). (I) can have antipsoriatic, antistic acid segment encoding (I) can have antipsoriatic, antistic and comparished a c

                                                                                                                                                                                                                                                                                                                                                               The present invention describes a method using novel primers involving the PCR based determination of histocompatibility locus antigen B (HLA-B) (Class I group type. Determining the HLA-B Class I group type of a subject comprises: (i) combining a group-specific untranslated region primer pair with a target DNA sample from the subject under conditions such that primer-based amplification of the target DNA may occur; and (ii) determining whether a nucleic acid product is produced by the amplification; where the ability of the primer pair to produce a nucleic acid product is associated with a particular HLA group type. The method can be used for HLA-B typing. In the method, the initial group specific amplification allows a PCR based separation of haplotypes in 95% of patient samples. It permits the resolution of cis/trans linkages of heterozygote sequencing results which cannot be achieved with other protocols. AAX37845 to AAX38286 represent DNA sequence used in the

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The present invention relates to a hairpin or hammerhead ribozyme, designed to cleave RNA encoding a cyclin or cell-cycle dependent kinase other than cell-cycle dependent kinases CDK1, PCNA and Cyclin B1. Representative examples of ribozyme recognition sites are given in AAA82415 to AAA86787. The ribozyme of the invention is useful for inhibiting restenosis by introduction of the ribozyme into cells. The ribozyme is resistant to endonuclease activity and hence is efficient in

                        Sequences were determined from the ends of chromosome 11-specific cosmids by automated sequencing without intermediate subcloning. A sample of 371 DNA sequence fragments were determined and of these, 277 were suitable for STS primer prediction by computer analysis (using the Primer program available from E.Lander, MIT). The STSs and cosmids were mapped by in situ hybridisation, somatic cell hybrid analysis or both. Using this method, 370 STSs specific for human chromosome 11 were generated and most of them were regionally mapped. This procedure illustrates a novel method for sequencing complex genomes, designated "sequence sampled mapping". The sequence sampled mapping method is useful for the complete sequencing of genomic DNA directly from cosmid clones. See AAQ8201-Q82706 for STS primers. (Updated on 25-MAR-2003 to correct PN
                                                                                                                                                                                                                                                                          Sequencing complex genomes, present as fragments in a cosmid library sequencing end-specific nucleotides of each clone then correlating wispatial relationship of cosmid, esp. for mammalian chromosomes.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The present invention relates to a method of inhibiting osteoclast-mediated bone resorption, comprising inhibiting the expression of an osteoclast associated gene or the activity of a gene product encoded the osteoclast associated gene. The method is useful in inhibiting osteoclast-mediated bone resorption. The present sequence is a Brn3 transcription factor binding site shown in the exemplification of the

                                                                                                                    AAV46054 and AAV46200-V46264 are primers used in isolating human histocompatibility locus antigen (HLAA) Class I alleles which are used in a novel method of HLA Class I typing. The method involves combining a group-specific untranslated region primer pair with a target DNA to allow primer-based amplification of the DNA, and determining whether a nucleic acid product is produced by the amplification. The ability of the primer pair to produce a product is associated with a particular HLA group type. The methods can be used for typing the 3 classical HLA Class I genes (comprising the loci HLA-A, HLA-B, and HLA-C) in e.g. donors and hosts for tissue transplantation. The initial group specific amplification allows a PCR based separation of haplotypes in 95% of patient samples. The subsequent sequencing can provide for high-resolution typing
                                                                                                                                                                                                                                                                                                                    HLA Class I typing - by primer-based amplification group-specific untranslated region primer pair.
                                                                                                  Sequence

The polypeptide is useful in the manufacture of a medicament for treating a syndrome associated with a human disease. The polypeptide, polynucleotide and antibody are useful in diagnosing, treating or preventing NOVX-associated disorders, e.g. cancer, cachexia, Alzhaimer's disease, Parkinson's disease, obesity, diabetes, infectious diseases, metabolic syndrome X or dyslipidaemias. The nucleic acids are further used as hybridisation probes, in chromosome mapping, tissue typing, preventive medicine, and pharmacogenomics. The present sequence is used in the exemplification of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              respiratory epithelial cell; interleukin-13; respiratory; antiasthmatic; gene therapy; marker; PCR; primer; ss.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           New NOVX polypeptides and nucleic acid molecules useful for preventing of treating NOVX-associated disorders, e.g. cancer, diabetes, infection or obesity, and in chromosome mapping, tissue typing or pharmacogenomics.
                                                                                        Testing for bronchial asthma or chronic obstructive pulmonary disease leading the expression level of a marker gene in a biological sample from a subject with the expression level of the gene in a sample from a
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Sequence 18

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        CC obstructive pulmonary disease; The marker gene comprises: (a) a group of CC genes (S1) whose expression levels increase when respiratory epithelial CC cells are stimulated with interleukin-13; or (b) a group of genes (S2) CC whose expression levels decrease when respiratory epithelial cells are stimulated with interleukin-13. Also described: (1) a reagent (1) for CC testing for bronchial asthma or chronic obstructive pulmonary disease; (2) a kit for screening for a candidate compound for a therapeutic agent CC (2) a kit for screening for a candidate compound for a therapeutic agent CC an animal model for bronchial asthma or chronic obstructive pulmonary disease; (3) CC disease; (4) an inducer that induces bronchial asthma or chronic obstructive pulmonary disease; (5) a method for producing an animal model for bronchial asthma or chronic costructive pulmonary disease; (6) a therapeutic agent for bronchial asthma or antisense nucleic acid corresponding to a portion of the marker gene or an antisense nucleic acid corresponding to a portion of the marker gene; a ribozyme, a polynucleotide that suppresses the CC expression of the gene through an RNAi effect or an antibody recognising CC a protein encoded by a marker gene; and (7) a DNA chip for testing for or screening for a therapeutic agent for method CC is useful for testing for or screening for a therapeutic agent for method CC is useful for testing for or screening for a therapeutic agent for method cis used in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Matches

The method comprises determining the expression level of a marker gene in a biological sample from a subject, comparing the expression level determined with the expression level of the marker gene in a biological sample from a health, subject, and judging whether the subject has bronchial asthma or chronic subject, and judging whether the subject has bronchial asthma or chronic subject.
                     Inhibiting osteoclast-mediated bone resorption by inhibiting the expression of an osteoclast associated gene comprising OC 1-285 eactivity of a gene product encoded by the osteoclast associated of the context as 
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   osteopathic; osteoclast-mediated bone resorption; osteoclast associated gene; transcription factor; Brn3; ds; binding site.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  FXWXSSSSSSSSSSSSSSSSSSS
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             문
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    This invention relates to a novel method for the prediction, diagnosis, or prognosis of malignant neoplasia by the detection of at least two markers. The invention may also be useful for the development of cytostatic compounds through the regulation of the expression of a gene or activity of a protein associated with malignant neoplasia. The method is useful for prediction, diagnosis or prognosts of malignant neoplasia couch as breast cancer, ovarian cancer, gastric cancer, colon cancer, colon cancer, mesenchymal cancer, bladder cancer or non-small cell lung cancer. The polynucleotides and polypeptides defined in the specification, antisense polynucleotides targeting the polynucleotides, antibodies targeting either one of the polynucleotides or polypeptides, and compounds identified by the screening methods are useful for preventing or treating malignant neoplasia. The disease treated is preferably breast cancer. The present sequence is that of a PCR primer which was used in the exemplification of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Query Ma

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              junctions of genes encoding a polypeptide associated with lung and/or casal airway dysfunction and a second active agent comprising an antianflammatory steroid and ubiquinone. A composition of the invention has antiinflammatory, antiallergic, antiasthmatic, hypotensive, immunosuppressive, and cytostatic activity. The composition may have a cuse in antisense gene therapy. The composition is useful for treating or preventing a respiratory, lung or malignant disease or condition, also for enhancing the prophylactic or therapeutic respiratory effect of an antiinflammatory steroid in a subject, for reducing or depleting levels of adenosine of or reducing sensitivity to adenosine, reducing levels of adenosine receptor, producing bronchodilation, increasing levels of adenosine creceptor, producing bronchodilation, increasing levels of adenosine or lung suffactant in a subject s tissue, or treating bronchoconstriction.

Note: The sequence data for this patent is not represented in the printed specification, but was obtained in electronic format directly from WIPO as fer wine int/mih/sublished not segmences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Query Match

```

This invention describes a novel composition (a) a first active agent, comprising oligonucleotides, effective for alleviating

Predicting, diagnosing or prognosing malignant neoplasia by detecting least two markers, where the markers are genes from one or more

The oligonucleotides are derived from a gene encoding or regulating expression of a target polypeptide associated with lung airway or lung dysfunction or cancer and can be anti-sense to the corresponding mRNA. The invention also describes a kit, that comprises: (a) a delivery device, in separate containers, (b) the oligonucleotides, (c) instructions for adding a carrier and for use of the kit. The composition of the invention has antiallergic, antiinflammatory, antiasthmatic, is a

The oligomers comprise at least three 3'-5' linked nucleosides or their salts. At least one internucleoside linkage is not a phosphodiester linkage and at least one nucleoside comprises a base. Sequences of the invention are useful for binding to a DNA duplex target sequence via either CT or GT triplex helix binding motif and in antisense therapies. They are also used for treating diseases caused by viruses and for disgnostic applications to detect viral infections, bacterial infections and diseases such as cancers. The oligomers are also used as primers, in the treatment of pathological conditions associated with inflammatory conditions and for modulating target gene expression. They are also useful in gene therapy. The present sequence is an oligonucleotide used to illustrate
Human leukocyte antigen (HLA) typing, useful individuals e.g. by determining immunogenetic

                                                                                                                                                     The invention relates to a typing kit for judging human leukocyte antigen (HIAA) genotype of a sample by hybridising a substrate on which 10-24 base oligonucleotides (ABLJ0512-ABLJ1809) originating in the sequences of genes e.g. belonging to HIA class I antigens on human genome and containing gene polymorphisms as alloantigens have been immobilised as primers for amplification of cleaved mucletc acids relating to gene polymorphisms. The method is useful for judging HIA genotypes of individuals by determining immunogenetic differences before transplanting between them, providing genetic information to decide compatibility of organ and tissue for transplantation e.g. of bone marrow, kidney, liver, pancreas, Langerhans islet in pancreas and cornea, susceptibility diagnossis of genetic diseases and identifying individuals

 amplified product to specify the discrimination Nos. of the multiwell plates containing the clones having said marker sequence; (d) the order of the markers is changed so that the same discrimination Nos. succeed to the maximum in the specified discrimination Nos. to array the multiwell plates of the specified discrimination Nos. to array the multiwell plates; (e) the clones in the multiwell plates of the specified discrimination Nos. are mixed respectively in each wells of longitudinal and lateral directions; (f) the mixed clones are cultured and the resultant cultures are amplified by using the above primer; (g) signals are detected from the amplified products; (h) the clones in the multiwell plates are specified from the detected result; and (i) the clones are reconstituted as the positions on the chromosome and arrayed. The microarray is useful for gene analysis. ABI43937 to ABI45322 represent PCR primers for human chromosome 136-35 DNA, and ABI45323 to ABI45634 represent PCR primers for human chromosome 21q22.1, which are specifically claimed for use in the present invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The present invention describes a method of arraying genome clones. The method comprises: (a) clones of the genomic libraries contained in multiwell plates numbered for discrimination are mixed in each of the multiwell plates; (b) a primer designed based on the chromosome marker sequence is added to the mixture to carry out an amplification reaction; (c) a signal corresponding to the marker is detected from the resultant
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 12-MAR-2001; 2001JP-00068285
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         JP2001321190-A

                                                                                                                                                   of a vitamin D analogue, corticosteroid or macrolactam to a patient, e.g. for the treatment of psoriasis. It is based on the finding that the underlying cause of tachyphylaxis (tolerance) is the degradation of a drug in the patient, rather than desensitization or receptor down-regulation. Exposure of a patient to a drug for extended periods results in an increase in the expression of enzymes which are capable of metabolizing that drug. A method for treatment of tachyphylaxis involves inhibiting the induced metabolic enzyme by administration of an antagonist of the enzyme. Detection of an increase in the amount and/or activity of a metabolic enzyme capable of metabolizing a drug following extended exposure of a cell from an individual to the drug indicates the increased likelihood of that individual developing a tachyphylactic
                                                                                       Sequence 18
                                                                                                                                                                                                                                                                                                                                                                                                    The invention provides for the use of antagonists of P450 enzymes for the prevention or alleviation of a tachyphylactic response to administration of a vitamin D analogue, corticosteroid or macrolactam to a patient, e.g.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The present sequence is a sense primer for cytochrome P450 CYP1A1. RT-PCR was used to characterise metabolic enzyme induction by vitamin D analogues, corticosteroids and macrolactams in human skin. Expression of CYP1A1 increased in skin taken from psoriatic volunteers who exhibited tachyphylaxis after extended treatment with the macrolactam Tacrolimus.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                patient.

CC The present sequence is human truncated native mature colony stimulating CC factor-1 (CSF-1) encoding DNA. This sequence can be modified to produce CC high levels of long and short forms of CSF-1 and their truncated forms in CC particular systems such as E. coli. The invention relates to human and CC murine carboxy truncated forms of colony stimulating factor-1 (CSF-1) and their corresponding cDNA molecules. CSF-1 is a lymphokine useful for CC grimulating monocyte- precursor/macrophage cell production from CC progenitor bone marrow cells, enhancing the effectiveness of the immune CSF-1 is used as an adjunct to chemotherapy, in the restimulation of the immune system, and in treating leukaemia through bone marrow CC transplants or other accidental forms of immunosuppression such as CC Acquired Immune Deficiency Syndrome (AIDS). CSF-1 stimulates the CC production of lymphokines by macrophages and enhances their ability to kill target cells. CSF-1 is directly used for treating neoplasms and CC macrophagocytopenia in patients receiving cancer therapy and for patients morphagocytopenia in patients receiving cancer therapy and for patients with implanted bone marrow. CSF-1 cDNA is also used in gene therapy. CSF-1 is used to destroy the invading organisms or malignant cells indirectly by the stimulation of macrophage secretions and activity

ct tachykinin receptor B1 (TACREL), C1 esterase inhibitor (CINH), bradykinin receptor B2 (BERRE2), angiotensin converting enzyme C2 (ACCE) or protease inhibitor 4 (P14), comprising at least one C2 (ACCE) or protease inhibitor (CINH), angiotensin converting enzyme C2 (ACCE) or position. Also included are (1) a probe that hybridises to a polymorphic position as provided in the detailed summary of single C2 engulated polymorphisms comprising additional 5 and 3 flanking genomic Sequence; (2) analysing (M1) at least one nucleic acid sample comprising obtaining the sample from one or more polymorphic positions in a gene C3 encoding a protein selected from the group above; (3) constructing (M2) (4) identifying (M3) an individual at risk of developing a disorder C4 upon administration of an ACE inhibitor and/or vasopeptidase inhibitor C5 (M3) individual at risk of developing a disorder C6 upon administration of an ACE inhibitor and/or vasopeptidase inhibitor C7 (M3) individual comprising obtaining a nucleic acid sample, each of which C7 comprises one or more polymorphic positions within a gene encoding a c7 individual comprising obtaining a nucleic acid sample, determining the nucleotide present in at least one polymorphic positions within a gene encoding a c7 individual comprising obtaining a nucleic acid sample, determining the nucleotide present in at least one polymorphic position, and comparing at least one position with a known data set. The genety (M1, M2, M3 and M4) and compositions are useful for detecting, diagnosing, treating, and compositions are useful for detecting, diagnosing, treating, c7 individual at risk of developing at the polymorphic position, and comparing at the polymorphic position, and comparing at the polymorphic position, and diseases which c7 individual at the provided protein and the pence of the position, and comparing at the polymorphic position and diseases which c7 individual at the provided protein and the pence of the polymorphic position, coronary are polymorphic position, coronary polynuclootides are also useful for chromosome identification. Antibodies against the proteins may be utilised for immunophenotyping of cell lines and biological samples. The present sequence is a genotyping PCR primer for the gene encoding one of the proteins listed above aminopeptidase encoding one (XPNEP2 P2), bradykinin receptor B1 (B) C1 esterase inhibitor (C1NH), B1 (BDKRB1)

Sequence 18 BP; σ A; 1 C; 10 G; 1 T; 0 U; 0 Other;

CSF-1 induces the formation of colonies containing predominately macrophages. CSF-1 is useful for producing an N terminal carboxy truncated CSF-1 polypeptide which is useful for enhancing effectiveness of immune system, stimulating functions of differentiated cells, as anti-infective, antiviral, anti-microbial agent and for overcoming the immunosuppression induced by chemotherapy and resulting from other causes. CSF-1 is also directly useful in treatment of neoplasms and infections. CSF-1 destroys microorganisms or malignant cells indirectly by stimulating macrophage secretions and activity

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The present sequence is that of modified DNA encoding the N-terminal region of human colony stimulating factor-1 (CSF-1) mature protein. Deletion of 2 or 3 N-terminal residues of CSF-1 facilitates recombinant expression of the protein in bacterial host cells. The invention provides N-terminally deleted, C-truncated CSF-1 muteins (see AAB19532-42) that are capable of stimulating monocyte precursor/macrophage cell production from progenitor bone marrow cells. They can be used to treat an immunosuppressed patient following chemotherapy, bone marrow of neoplasms transplantation or disease, as well as in the direct therapy of neoplasms
                                                                                                                                                                                                                                                                           88.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       induced by chemotherapy and also for treating patients in the immunosuppressed state (to prevent rejection) after treatment for leukaemia through bone marrow transplants. CSF-1 enhances the growth ar differentiation of bone marrow-derived precursors into macrophages and restimulates the immune system to prevent the side effect of chemotherapeutic treatments and prevent the propensity of the patient to the state of the patient of the patient treatments.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              This sequence encodes an N-terminal fragment of human colony-stimulating factor-1 (CSF-1) protein. The invention relates to a carboxy truncated version of the CSF-1 short form protein having residues 3-158. CSF-1 is useful in regulating the immune system following immunosuppression
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Colony stimulating factor-1 polypeptide useful in regulating immune system after immunosuppression induced by chemotherapy and for treating patients in the immunosuppressed state after bone marrow transplants.

AAZ69579 to AAZ77440 represent amplification primers for the biallelic markers. The biallelic markers of the invention have a variety of uses: they can be used for high density mapping of the human genome, and in complex association studies and haplotyping studies which are useful in determining the genetic basis for disease states. Compositions and methods of the invention can also be useful for the identification of the targets for the development of pharmaceutical agents and diagnostic methods, as well as the characterisation of the differential efficacious responses to and side effects from pharmaceutical agents acting on a disease as well as other treatment.

N.B. The SEQ ID NOS 2852, 2913, 2974, 3035, 3096, 3157, 3227, 3297 and 3357, are not actually given a sequence in the Sequence Listing from the
                       AAZ65654 to AAZ69578 represent human biallelic markers from the present invention, which contain a polymorphic base at position 24 of their nucleotide sequences. AAZ69579 to AAZ77440 represent amplification primers for the biallelic markers. The biallelic markers of the invention have a variety of uses: they can be used for high density mapping of the human genome, and in complex association studies and haplotyping studies which are useful in determining the genetic basis for disease states.

at least one agent (I) that prevents, alleviates and, or failure adenosine-mediated cardiopulmonary and/or renal damage and/or failure.

(I) is an adenosine A2a receptor agonist (Ia), or an oligonucleotide (Ib), containing less than 15% adenosine (A), that is antisense to targenes or corresponding RNA, to genomic flanking regions (i.e. 5' or 3' ends or segments between coding and non-coding sequences), or to all segments of mRNA encoding the adenosine A1, A2a, A2b or A3 receptors, has A1, A2b or A3 agonist activity or A2a antagonist activity (or at least no agonist activity at this receptor). (I) may be a mixture of and (1b), and optionally also contains one or more surfactants. The and (1b), and optionally also contains one or more surfactants.
                                                                                                                                                                                                                                                                                                                                                                                      08-JUN-1998;

PCR was used in an experiment examining the effects of connective tissue growth factor (CTGF) on mesangial cell matrix production. The CTGF gene had been identified, using a novel method of the invention, as being induced by high glucose in mesangial cells. To investigate the direct effects of CTGF pur-regulation, mesangial cells were incubated with recombinant CTGF protein. This resulted in upregulation of cell collagens I and IV and fibronectin. These proteins typify matrix accumulation as seen in diabetic nepropathy (DN). The invention provides methods for identifying genes having a role in the presentation of DN. These genes can be used as a diagnostic marker for the progression and presentation of DN, as an index of disease activity and the rate of progression of DN, and as a basis for identifying drugs for use in the prevention and/or therapy of DN
                                                                                                                                                                                                                                     Human; Ship-
inhibition;

Also described is a method of inhibiting the expression of Ship-2 in human cells or tissues in vitro comprising contacting the cells with the phosphorothioate antisense oligonucleotides. The phosphorothioate antisense oligonucleotides can be used to treat animals (especially humans) suspected of having or being prone to a disease or condition associated with Ship-2 expression. The present sequence represents a phosphorothioate antisense oligonucleotide for human Ship-2, from the

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               CC codons, genomic flanking regions, intron-exon borders, the 3 cent and the juxta-section between coding and non-coding regions and all CC segments of RNAs encoding proteins associated with one or more diseases, CC conditions or mixtures. The antisense oligonucleotides may be derived CC from sequences AAX55272-74. These multiple target oligonucleotides (specifically AAX55180-271) can be used for the antisense treatment of CC diseases and conditions. Typical diseases and conditions are those CC associated with impaired respiration and inflammation, including lung CC diseases, pulmonary vasoconstriction, inflammation, respiratory CC diseases, pulmonary vasoconstriction, inflammation, respiratory CC diseases, puncome, pain, cystic fibrosis, pulmonary hypertension, CC pulmonary vasoconstriction, emphysema, chronic obstructive pulmonary of CC disease (COPD), and cancers such as leukemias, lymphomas, carcinomas e.g. CC colon cancer, breast cancer, lung cancer, pancer, metastases, as well as all types of cancers which may metastasize or have metastasized to the lungs, including breast and prostate cancer
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Matches

They can be used for treating e.g. ischaemic conditions, pulmonary vasoconstriction, allergies, asth impeded respiration, respiratory distress syndrome, pain, cystic fibrosis, pulmonary hypertension, emphysema, chronic obstructive pulmonary disease (COPD), and cancers such as leukaemias, lymphomas, carcinomas, and cancers which may metastasise to the lungs, including breast and prostate cancer. The reduction of the adenosine content of ONs reduces side effects. The A-containing ONs break down with the release of deoxyadenosine which activates adenosine receptors causing bronchoconstriction and inflammation. AAA32313 to AAA35312 represent the processor.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  nucleotide sequences given in the sequence listing from the present invention, which correspond to SEQ ID NO:1 to 2815, and then the last 185 sequences are also called SEQ ID NO:1 to 185, but the sequences differ from the previously named sequences. SEQ ID NO:11 to 1680 (AAA32323 to AAA33992) are specifically claimed ONs from the present invention. N.B. Sequences given in the disclosure of the present invention do not match

                                                                                                                                                                                                                                                                                                                                                                                                           This sequence represents an antisense oligonucleotide used to test the method of the invention. The method of the invention is for evaluation of an antisense oligomer for its ability to inhibit gene expression, and comprises: microinjecting varying amounts of the antisense oligomer into a host cell along with a target vector for the expression of a gene containing a target sequence for the antisense oligomer and a control vector for the expression of a control gene that encodes a detectable protein and does not contain the target sequence; and measuring expression of the target gene and the control gene. Increasing inhibition of the target gene and the control gene expression, as the amount of antisense oligomer increases indicates the ability of the antisense oligomer to inhibit gene expression. The method is used in oligonucleotide based therapy and diagnosis. The oligomers have enhanced
                                                                                                                                                                                                                                                                                                                                                                          antisense oligomer to inhibit gene expression. The metnod is oligonucleotide-based therapy and diagnosis. The oligomers has affinity for complementary target nucleic acid sequences and binding affinity for double-stranded and/or single-stranded
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Screening of anti-sense oligo:nucleotide(s) for ability to inhibit gene expression - comprises micro-injecting varying amounts of the anti-sense oligomer into a host cell and measuring expression of the target and

The invention also describes; (A) a method for screening a human bone/cartilage disease treating agent including the steps: (1) transforming an animal cell with the above vector, (2) culturing the animal cell in the presence of a sample and (3) detecting the increase in the sulfate ion intake to the cell; (B) a drug preparation for the treatment of human bone/cartilage disease containing the above vector as the active component. The sulfate transporter genecontaining vector is high in expression efficiency. AAX78055-X78073 are

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     S
                                                                              The sequences given in AATS8754-55 represent the 5' terminal sequences derived from an over expressing clone and the corresponding wild type sequence from the long form of human colony stimulating factor (HuCSF)-1 (LCSF). In the over expressing form the codons for the first six amino acids of LCSF were altered to those favoured in bacteria. This results in higher levels of production of both the full length LCSF protein and truncated versions of it (see also AAMM1072-86). The truncated proteins pref. have 3 amino acids deleted at the N-terminal end, and a variable number deleted from the C-terminal end. The truncated proteins have mol. with much closer to those found in naturally occurring CSF-1 dimers, and it is thought that natural CSF-1 may be C-terminally truncated. The novel proteins may be useful for overcoming immuno- suppression induced e.g. by Chemotherapy, bone marrow transplantation or diseases, e.g. ALDS.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         21-JAN-1986;

The present sequence is an antisense oligonucleotide HSA2ARECAS7 specific for the human A2a adenosine receptor. The method can be used to treat airway diseases such as cystic fibrosis, asthma, chronic obstructive pulmonary disease, bronchitis and other airway diseases characterised by an inflammatory response. By eliminating adenosine from the antisense ON, its liberation upon antisense degradation is prevented, thereby preventing adenosine-induced bronchoconstriction in patients with

This invention relates to a novel method for generating and detecting target nucleic acid sequences. Specifically, it refers to the use of a structure specific nuclease, alone or in combination with nucleic acid polymerase, especially the ones lacking 5' nuclease activity that can detect and measure target polymucleotides. The present invention describes using a probe with a signalling moiety that is inactivated unless hybridised to the target where upon the resulting double stranded duplex provides a suitable substrate for the structure specific nuclease and generation of the detectable signal. Accordingly, the method is useful for generating a signal that indicates the presence of a target
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The invention relates to an enzymatic nucleic acid molecule which specifically cleaves RNA derived from hepatitis C virus (HCV), in which the binding arms of the enzymatic nucleic acid molecule comprises sequences complementary to any of the defined substrate sequences given in the specification. The nucleic acid molecule may be administered for the treatment of HCV infections, especially in combination with type I interferons. The present sequence represents a HCV DNAzyme substrate
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        08-DEC-2003; 2003WO-US039199
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            structure specific

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Matches
                                                        used in a method to detect a mutation in the glucocerebrosidase gene, corresponding to an insertion of a G nucleotide adjacent to base 57 of exon 2 (see also AAQ39287 and AAQ39304). The template DNA used was isolated from peripheral blood leukocytes. Glucocerebrosidase is an enzyme which is required for the lysosomal degradation of glycolipids (see also AAQ39286). A deficiency of this enzyme the extremely insoluble disease, as in the absence of glucocerebrosidase, the extremely insoluble glucosylceramide (glucocerebroside) accumulates. The insertion of a G nucleotide adjacent to position 84 in the glucocere- brosidase cDNA has been characterised as a new Gaucher disease causing mutation. The
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Glucocerebrosidase
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Sequence 17

The nucleic acids are useful for treating hepatitis B virus infection, hepatitis, hepatocellular carcinoma, cirrhosis and liver failure, either alone or in combination with other therapies such as lamivudine and interferons. The nucleic acids are useful as diagnostic tools to examine genetic drift and mutations within diseased cells, for detecting the presence of HBV RNA in a cell, for the study of RNA and for down-regulating gene expression of

The nucleic acid molecule may be administered for the treatment of HCV infections, especially in combination with type I interferons. The present sequence represents a HCV DNAzyme substrate

                                                                                                                                                                                                                                                                                                                                                             The present invention is based upon methods of treating inflammatory conditions in the intestinal tract of mammala using fibroblast growth factor (FGF)-CX and/or FCTRX(undefined) polypeptides and their encoding polynucleotides. The invention is useful for treating inflammatory pathology such as inflammatory bowel disease, inflammatory condition occurring in the colon or small intestine and Crohn's disease. The invention is also useful in gene therapy. The present sequence is human intestinal trefoil factor (ITP) amplifying RT-PCR primer. The primer is used in the exemplification of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Boldog FL, Burgess Cl
